UNIVERSITY**

Financial Mobile Platform For Student

Put Your Name

#Index0000

Background Of Study

The rapid growth of ICT has transformed financial transactions through secure and efficient mobile payment systems (Dahlberg, Guo, & Ondrus, 2025). Although mobile money has improved financial inclusion in Ghana (Aker & Mbiti, 2022), Koforidua Technical University (KTU) still relies on manual fee payment and verification processes that cause delays and inconvenience. This study therefore proposes a Student Pay Mobile Application to simplify fee payments, provide instant digital receipts, and improve financial management.

Problem Statement

Despite the widespread adoption of mobile payment systems in Ghana, Koforidua Technical University (KTU) still relies largely on traditional fee payment methods that require students to visit banks. This process results in long queues, delays in registration, and risks associated with carrying cash and handling paper receipts. Although USSD-based payment options exist, they offer limited functionality and user convenience. Therefore, there is a need for a secure and user-friendly mobile payment application that provides real-time payment confirmation, digital receipts, and efficient transaction management to improve the university's fee payment process.

Objective of study

Main

Design and development of financial mobile platform for students in Koforidua Technical University (KTU).

Specific Objectives

1. Design and develop a module that will integrate multiple digital payment options.
2. Design and develop a module that will ensure real-time payment processing with instant confirmation notifications.
3. Design and develop a module that will provide transaction histories with downloadable PDF receipts.

Context Diagram For Pay4Me

Tools and Technologies

1. React Native for Mobile app
2. PHP for backend API
3. MySQL database
4. WebStorm and PHPStorm development environment
